## Inertol-Poxitar<sup>®</sup> F

Epoxy-anthracene oil-combination. Heavy duty coating for steel and concrete

Product description	Resistant 2-component reaction hardening coating of low solvent content based on an epoxy-anthracene oil-combination with mineral fillers. Approved and listed by Federal Institute for Hydraulic Engineering (BAW).				
Fields of application:	Protective coat for concrete and steel, as internal and external coating for buried and sub- merged structures, e.g. sewage systems, chemical industry etc. Also suitable where applica- tion onto damp concrete is inevitable. Not suitable for surfaces in contact with drinking water, housing, stables etc.				
Properties:	After complete curing Inertol-Poxitar F is: <b>tough hard, heavy duty</b>				
	abrasion and impact resistant				
	excellent resistance to water and chemicals.				
	Inertol-Poxitar F can be exposed to water immediately after application. But take into con- sideration that solvents get into the water which leads to temporary contamination.				
	Immediate exposure to water should therefore only be considered in special cases and after consulting the authorities for the protection of environment.				
Product data					
Colour shades:	Black, red				
Packaging:	17 kg net.				

Systems	
Coating systems:	<u>Concrete:</u> 2-3 x Inertol-Poxitar F; 1 <sup>st</sup> coat to be thinned with max. 5% by weight Thinner S 2 <sup>nd</sup> coat unthinned.
	<u>Steel:</u> 2-3 x Inertol-Poxitar F; preferably alternating colour shades. In case of heavy mechanical exposure priming with Friazinc R is recommended.
Surface Preparation:	<u>Concrete:</u> Solid and gripping, free of cement laitance, dust, loose and friable particles and other contamination. Concrete moisture content max. 8%
	Sweep blasting increases adhesion. This is particularly important in case of underwater exposure. Large holes, holidays and cavities etc. should be levelled up with e.g.lcoment 520 Mortar or Inertol-Poxitar Mortar.
	Steel: Blast cleaning to Sa $2\frac{1}{2}$ according to EN ISO 12944, part 4, free from dirt, oil and grease.

## **Technical data**

Material consumption	:	1					1	
		Specific gravity liquid		content ox. %	Theoretical film thickness with 100 g/m <sup>2</sup> consumption		Material- consumption for me dium dry film thick- ness of	
		approx. kg/L	by vol.	by weight	wet mi- crons	dry mi- crons	microns	approx. kg/m²
	Inertol-Poxitar F	1,8	87	96	56	48	150	0,310
	Friazinc R	2,8	67	89	36	24	60 80*)	0,250 0,335
	*) For spray applica Apart from small per layer.		dry film th	ickness of	Friazinc R	should not	exceed 15	) microns
Mixing ratio in parts by weight: (Components A : B)	85 : 15							
Resistance:	<u>Chemical influences:</u> Inertol-Poxitar F is resistant to water, seawater, barnacles, diluted acids and lyes, neutral salts, mineral and fuel oils, grease, detergents etc.							
	Sails, minerai anu	iuei olis, gi	0400, 401	orgonito ot				
	Not resistant to ex			0		oil.		
		posure to k prox. + 100	oenzene-h ℃, damp	heat and v	ns and tar		rox. + 60 <i>°</i> C	

Hints on applicat	ion								
Preparation of material:	Stir Component A very thoroughly using an electric stirrer. Add component B and mix both components very thoroughly (including sides and bottom of the container).								
Application method:	The application method has a major effect on achieving uniform thickness and appearance. Spray application will give the best results. The indicated dry film thickness is easily achieved by airless spray and by brush. Adding solvents reduces the sag resistance and the dry film thickness. In case of application by roller or brush, additional applications may be- come necessary to achieve the required coating thickness, depending on type of construc- tion, site conditions, colour shade etc. Prior to major coating operations a test application on site may be useful to ensure the selected application method will provide the requested re- sults.								
	<u>By brush and roller:</u> No solvents should be added; curing, especially under water would be strongly retarded.								
	<u>Airless-spraying:</u> With a spray pressure in gun of min. 150 bar; diameter of hoses min. 8 mm (% inch); nozzle size 0,53 – 0,66 mm (0,021 – 0,026 inch); spraying angle 40° - 80°								
	At low temperatures max. 5% by weight Thinner S may be added. In this case an immediate exposure to water is not possible.								
Application	Minimum +5℃.								
temperature: (material and surface)	Under unfavourable conditions, e.g. influence of high air humidity into the fresh coating, sur- face damages (brown discolouration) and possibly little alligatoring may occur. However, thi will not effect the quality.								
Potlife:	At +20 ℃ approx. 1 <sup>1</sup> / <sub>2</sub> h.								
Waiting time between coats:	Waiting time between operations up to max. 150 microns dry film thickness:								
	Product	Waiting time	+5℃ after	+10℃ after	+15℃ after	+20 °C after	+25℃ after	+30 ℃ after	
	Inertol-Poxitar F	Min. Max.	36 h 96 h	30 h 72 h	24 h 60 h	12 h 48 h	8 h 36 h	6 h 24 h	
	If these maximum waiting times cannot be observed, the surface must be activated by sweep blasting to avoid intercoat adhesion problems. Prior to application of the next coat a thorough dedusting is necessary.								
	Between Friazinc R and Inertol-Poxitar F: 24 h at +20 °C (see technical data sheet).								
Final drying time:	At +20 $^{\circ}$ C and good ventilation final curing is achieved after approx. 8-10 days. Curing also takes place at lower temperatures – below +10 $^{\circ}$ C – but it takes longer.								
	Curing also takes place under water.								
Cleaning of implements:	Thinner S; only thin material where stated.								
Value Base	All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.								
Local Restrictions	Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.								
Health and Safety Information	For information and a users should refer to logical, toxicological	the most r	ecent Mat	erial Safet					

## Legal Notes

The information, and, in particular, the recommendations relating to the application and enduse of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
